

## Motor Vehicle

- ❖ Adjusted resolution for the "Additional Information" box so it will properly appear on the registration and New to System/Update screens.
- ❖ Addressed an issue causing New Registrations on AP plates to fail when adding them to a fleet.
- ❖ Fixed print priorities to display correctly, specifically the "New Expiration Date" and "New Reg. Old Plate" codes.
- ❖ Fixed an error occurring when processing a transfer on an AP class vehicle.
- ❖ Fixed an error occurring when processing a registration on a plate with a status of "P". The system will now direct the user to update the status in New to System/Update prior to the transaction.
- ❖ Corrected issues that occurred related to subclasses. This was causing some rental plates and 10000lb PC plates to be categorized as P7 which is National Guard 10000lb. This issue is resolved and the update will also correct the records in the data to change them back to their correct subclasses.

## Blue Book

- ❖ Updated for the latest vehicles and options.
